MAN AND MACHINE

Science and technology have developed a lot since the fifteenth century, when the artist Leonardo da Vinci drew mechanical figures that looked like men – the first known robot designs. Now, of course, robots are everywhere, from factories to space stations, and they safely carry out all sorts of tasks, from cutting the grass to performing surgery. However, until recently most of them haven't looked like humans at all, as Leonardo imagined, and they certainly haven't had feelings. But now all that is beginning to change. Imagine a world in which robots not only look like us but also know our moods, and have feelings themselves. It might even be possible for robots to become our friends! Science fiction writers have written about a world just like that for many years, and scientists are now predicting that intelligent robots like these will exist quite soon. In fact, they've already produced one that recognizes sound, movement and touch. Its bright red heart, which you can see through its plastic body, beats faster if you are rough, with the robot, or shout at it. But its heart slows down if you are gentle with it. Although it can't talk, it's easy to believe the robot actually has feelings!

It's true that so far 'human' robots do not really move, talk or respond in the way we humans do, but they are becoming more advanced all the time. At some point in the future, a robot will definitely be created that may not look like us, but will be capable of doing anything that we can. And then we will truly be in the world of science fiction stories!

1. Write two facts about robots.

There are various options that can be accepted. Some examples are mentioned below.

Robots are everywhere/ they carry out all sorts of tasks / until recently most of them haven't looked like humans/ they certainly haven't had feelings

a) _____ (1)

b) _____ (1)

2. What do scientists predict?

Scientists are now predicting that intelligent robots like these will exist quite soon. (1)

3. What is true about 'human' robots?

There are various options that can be accepted. Some examples are mentioned below.

'Human' robots do not really move/ they don't talk / they don't respond in the way we humans do/ they are becoming more advanced all the time.

a) _____ (1)

b) _____ (1)

4. Modern robots look like humans. True / False (1)
5. Mention 4 facts about the already existing robot.
1. They recognize sound, movement and touch. (0.5)
 2. Their bright red hearts, which you can see through their plastic body, beat faster if you are rough, with them or shout at them. (0.5)
 3. But their hearts slow down if you are gentle with them. (0.5)
 4. Although they can't talk, it's easy to believe the robots actually have feelings! (0.5)
6. The author believes that in the future robots will both look and function like us. True / False (1)

FIVE A DAY

How much fruit do you eat every day? And how many vegetables? Food experts today think that we don't have enough of these foods in our diet and they say that we eat too much fat and sugar. This is why the World Health Organization has started a campaign to encourage us to eat more fruit and vegetables. The campaign in the UK is called Five a Day.

Why eat fruit and vegetables?

Fruit and vegetables are full of important vitamins and minerals which our bodies need to be healthy. Scientific studies have shown that eating a lot of them can prevent some illnesses like diabetes and **obesity**. Also, fruit and vegetables don't contain much fat and they don't have many calories, so they help to keep us slim.

What counts?

Nearly all fruit and vegetables count towards your five a day, except potatoes. The food can be fresh, frozen, or in a can, like peaches or peas. It can be raw, cooked, or even dried, like raisins or banana chips. A glass of 100% fruit juice with no added sugar also counts as one portion.

How much is a portion?

A portion of fresh fruit or vegetables depends on the size of the food. In the case of small-sized fruit like plums or mandarin oranges, one portion is two pieces of fruit. A piece of medium sized fruit like an apple, an orange, or a pear also counts as one portion. With larger fruit like melon and pineapple, one portion is a 5 cm slice. We use the same method for calculating portions with vegetables. In the case of salad vegetables, a medium-sized tomato or a 5cm piece of cucumber count as one portion each. For smaller, cooked vegetables like beans and carrots, one portion is three large spoonfuls of vegetables.

1. The campaign to eat more healthy food in the UK is called Six a Day. True / False (1)
